

Naheel K K

Software Developer

kznaheel16@gmail.com — +91 7306058768 — github.com/naheelkk — LinkedIn: Naheel K K

PROFILE

Results-driven Software Developer specializing in full-stack development and AI/ML integrations. Adept at building scalable web applications leveraging modern frameworks (React.js, Flask, Node.js) and seamlessly integrating emerging AI technologies (LLMs, RAG architectures). Known for a strong work ethic, rapid learning capabilities, and a commitment to delivering robust, real-world solutions that align with modern software engineering best practices.

EDUCATION

Master of Computer Applications (MCA)

MES College of Engineering, Kerala

2024 – 2026

CGPA: 8.7 / 10

B.Voc in Software Development

Farook College, Calicut

2021 – 2024

CGPA: 9.2 / 10

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, SQL, HTML/CSS

Backend / Web: React.js, Flask, Node.js, FastAPI

AI / ML: PyTorch, LangChain, BERT

Tools & Platforms: Git, Linux, Postman, VS Code, SQLite

PROJECTS

ALPS — Adaptive Learning Platform System

- Developed a comprehensive full-stack educational platform using React.js, TailwindCSS, and Flask, structured for containerized deployment via Docker.
- Engineered a Contextual Multi-Armed Bandit (LinUCB) recommendation engine to track per-concept user mastery and dynamically suggest personalized learning resources.
- Integrated Google Generative AI (LLMs) to automatically analyze and tag lesson contents and quiz questions with relevant educational topics.
- Designed RESTful APIs and relational database schemas to efficiently handle complex workflows including user authentication, adaptive quizzes, and performance analytics.

Factify — AI-Powered Fact Checking System

- Designed and implemented a fake news detection system using fine-tuned BERT models trained on the ISOT dataset.
- Built a modular ML pipeline covering data preprocessing, model training, evaluation, and inference.
- Developed a FastAPI backend exposing high-performance REST endpoints for prediction generation and explanations.
- Emphasized system transparency and explainability to improve user trust in AI-driven fact-checking.

RAG-Based Question Answering System

- Built a Retrieval-Augmented Generation (RAG) system synthesizing LangChain and Hugging Face language models.
- Implemented advanced text chunking and FAISS-based vector search to ensure highly efficient semantic retrieval.
- Integrated retrieval mechanisms seamlessly with text generation to produce accurate, context-grounded responses.

OTHER SKILLS

Soft Skills: Analytical Problem Solving, Clear Technical Communication, Rapid Prototyping, Agile Methodologies, System-Level Thinking
